## RESEARCH PROJECTS / EXPERIENCES

---

### Optimizing the Data Mixing Algorithm with Domain Adaptation Methods

Sep 2020 - Feb 2021

Research Scientist Intern, Amazon Alexa AI

- Proposed and implemented optimized data mixing algorithms with domain adaptation approaches to improve the BERT-based domain classification model for Alexa NLU.
- Proposed and experimented with a new data split pipeline based on the optimized data mixing algorithms.
- NLU models with newly proposed data mixing pipeline performed 20% better than the existing one.

### Interactive Text Summarization and Aspect Ranking on Production Reviews

May 2020 - Aug 2020

Data Science and Machine Learning Intern, Seagate

- Designed and implemented a single-doc text summarizer for a social listening tool based on the pointer-generator architecture.

- Proposed and implemented a pipeline to do online review rating prediction. The pipeline included aspect extraction with active learning, aspect based sentiment analysis, user rating prediction modeling and feature ranking.

### **Live Tweets Analysis and Visualization System**

*Feb 2019 - Apr 2019*

*Research Assistant, University of Colorado Boulder*

- Implemented a big data framework based on twitter data with Docker, Kafka (streaming processing), Pyspark (sentimental analysis with NLTK), Mongodb, Elastic Search, Kibana (visualization) & Google Cloud.
- A dashboard was built for visualization of sentimental data analysis results using Flask

### **Alexa Skills Evaluation**

*Jun 2018 - Sep 2018*

*Research Assistant, University of Colorado Boulder*

- Developed a voice skill crawler to collect responses data from 45708 Aelxa skills
- Deployed deep learning models with pre-trained/self-trained embeddings to do Alexa skills' topic classification
- Analyzed responses data of the most 100 popular Alexa skills and studied these skills' compliance situations of current design guidelines
- Proposed research agenda for future evaluation tool development (published research papers [5][6])
